

MY INTENTION TO BE IN UNIVERSITY

We are in the competitive world now. From the beginning of education to job sector, we have to compete others to gain our position in a particular place. To survive in this world, we have to get our best selves out. University is a place, where people can swim in the ocean of knowledge. University is no longer a fresh word to the people nowadays. First of all, students can only learn fundamental knowledge during high school while they are able to focus on their own interest in the university. This period is the key to knowledge accumulation. Which will contribute a lot to the future of an individual. Moreover university is no doubt the symbol of high education. It's offer more than pure knowledge. It can be seen from the fact that most of the international companies will only hire those who at least have a bachelor's degree in study. University helps us to get that degree for our desire jobs. Finally I cannot oversee the fact that many times studying at a university also means living in a city far from home . New responsibilities always appear but they do not become serious drawbacks . In contrast, the new sense of freedom and independence a young man can experience or things he will through of as something of great importance. One thing is for sure though, there is a chance for everyone in the community of a university to meet people , make new friends and know individuals of great importance. Last but not least I wish to say that the purpose of university is ti harvest knowledge and to being educated . So it is obvious that everyone can find a reason for attending university and so I am.
