

Report-2:-

1. Use String.xml, Color.xml in TextView
2. Add large text to string.xml, add a technique to scroll then large text.

Work details:- A Project in Android Studio opens two files:

- ① one is for the activity.main.xml
- ② Another one is for the MainActivity.java

activity.main.xml:-

For this application I choose linear.layout.

Scroll view:- For large text I use scroll view. Using scroll view, I can scroll this large text. All element must be kept with the scroll view tag. otherwise not working scroll view tag.

Text view:- Here, A text is fetched via string.xml and placed inside. The text view and also a color is fetched via color.xml and placed inside the text color. I take text size 20dp and padding 20dp and also I take android:JustificationMode = "Inter-word"
