

Report-3:-

- ① Add ID in Text view.
- ② access from Java
- ③ manipulate the content of textview and apply another new operation.

work details :-

A Project in Android studio open two files.

- ① One is for the activity\_main.xml
- ② Another is for the Main Activity.java.

activity main.xml :-

For this application, I choose linear layout.

Text view :-

For this application, I have take Textview tag and also need ID for Textview tag. Through ID access from Java and manipulate the content of Textview.

Main Activity.java :- Finally I used access modify and also create a object. Java and xml file are connected. Then I connect the Java file with the name given in the ID of the xml file. Here I used setText in object name.
