

Mesh Analysis

→ when Electric engineering is important, then all the sectors of electric engineering is important.

when, we can't solve a circuit with the normal nodal rule or, series or parallel rule then mesh will help us.

with mesh, we will solve maximum circuit analysis.

Some times delta or wye or nodal can't work enough, then mesh is applicable and it's workable.

with mesh circuit or hard to hard comes in the way of easyness.

That's for mesh analysis is important
