

Well i'm using ubuntu 18.04 . In today's lab we have learn about some basic command of linux OS . By typing on terminal we can do everything in linux. The user can see what is happening in the background of the computer. I think it's the real fun part of using linux.

By the way , today we have learned about **"cd"** command . By typing cd how can we enter into a directory . How to find the list ( existing folder , file everything) of that directory. To do this we used **"ls" command (also ls -l, ls -a etc).**

The most important and fun part was , " knowing about **"sudo"** command" .

by this command we can make change in root level of the system .

**//sudo apt-get install name (to install something**  
**//sudo apt get update (to update)**  
**//sudo apt get upgrade (to upgrade)**

Also now we can add **(sudo adduser name)** multiple user in the same OS in linux. Can delete **(sudo deluser name)** that too.

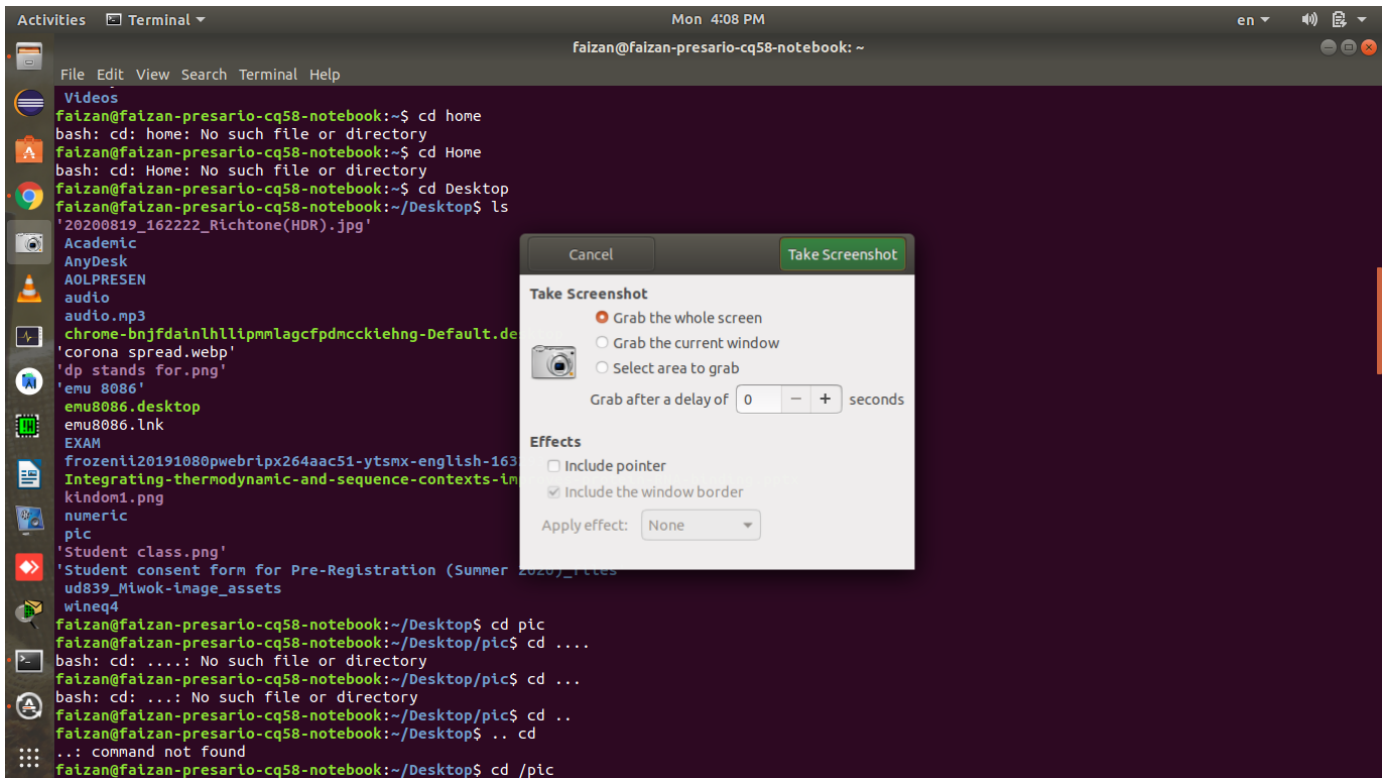

And there is muce , maybe a ocean of fun box. Isn't it interesting?

(terminal picture given below)

```
Some index files failed to download. They have been ignored, or old ones used instead.
felzan@felzan-pressrio-cq54-notebook:~$ sudo apt-get update ; sudo apt get upgrade; sudo apt-get install; by mkdir we can make a new directory
```
